+

Key column(s) for duplicate detection (comma-separated, optional)

e.g. customer_id

Run audit

Audit result

ROWS 10	COLUMNS 4	SEVERITY-WEIGHTED ... \$6.00	AUDIT RUN ID 11
-------------------------------	---------------------------------	--	---------------------------------------

The cost figure is a configurable heuristic (issue count × your own per-issue weights), not a validated financial estimate. Adjust it in `config/cost_config.yaml`.

Healthy

Health score, out of 100

What this score means

85+ is healthy, 60–84 needs attention, below 60 is critical. The score weighs nulls, duplicates, format issues, outliers, and rule violations equally by default — adjust the weighting in `engine/scoring.py` if one dimension matters more for your data.

Issues found (4)

● Issue detail

issue_type	column_name	detail
null	email	10.0% null
duplicate	None	2 exact duplicate rows
outlier	order_amount	1 outliers via iqr (10.0%)
outlier	customer_id,order_amount	1 outliers via isolation_forest (10.0%)
